

0071-OS

WATER REPELLENT TEXTILE FINISHES AND METHOD OF MAKING**ABSTRACT OF THE DISCLOSURE**

A composition that is preferably an aqueous emulsion is disclosed that comprises:

- 1) a compound of a defined formula comprising a silicon moiety and an epoxy
5 functionality;
- 2) a compound of a defined formula comprising a silicon moiety and an alkoxy
functionality;
- 3) a crosslinker of a defined formula comprising a silicon moiety; and
- 4) a catalyst.

10 Upon treating fibers or fabrics with the composition, a condensation reaction product is formed upon reaction with the catalyst at curing temperatures that imparts superior durability, water repellency, and softness to the fibers or fabrics.
